SKILLS

- Java, Node.js, HTML, CSS, Angular, React, Spring Boot, Kotlin, Express.js, MySQL, Javascript, Microservices

EXPERIENCE

Senior Software Engineer May 2025 - Present

Pine Labs

- Designed and scaled **distributed microservices** for EMI workflows, improving throughput, fault tolerance, and reliability across high-volume payment systems.
- Increased **EMI Offer Discovery capacity by 2000+ TPS** under **50ms** through Kotlin coroutine-based concurrency optimization, caching improvements, and refined content negotiation plugins.
- Improved production **observability** by integrating OpenTelemetry Java Agent and adding custom span attributes for granular trace filtering, metric analysis, and service diagnostics.
- Delivered **high-quality software** at a rapid pace using AI-assisted development tools, while designing **scalable architecture** from day one.
- Contributed to an **agentic commerce framework** that allows merchants to expose catalog, cart, checkout, payments, and order workflows through a common protocol.
- Enabled **AI-agent-compatible commerce flows** where buyer and seller agents can coordinate product discovery, checkout, and payment interactions across providers.

FullStack Engineer Jan 2024 - Jul 2024

Eduspeed Technologies

- Built and enhanced an **EdTech platform** using Angular and Spring Boot, improving performance, scalability, and product functionality across coaching center and assessment workflows.
- Led development of UI components and backend services for coaching center management and assessment modules from the ground up.
- Reduced backend calls by **50%** through caching, lazy loading, and resource-saving frontend/backend interaction patterns.
- Designed optimized database schemas and bulk update mechanisms, improving large dataset handling efficiency by **30%**.

FullStack Engineer Aug 2021 - Jan 2024

Cognizant

- Designed and developed a full-stack telecom solution that centralized customer data, reducing query resolution time by **40%** and improving service efficiency.
- Architected scalable Spring Boot microservices using MVC design and **SOLID** principles for maintainable, extensible architecture.
- Engineered a MySQL data layer with optimized schema design for efficient processing of large-scale telecom customer data.
- Implemented secure authentication with JWT, Eureka Server, and API Gateway, while building a responsive Angular frontend that improved user satisfaction by **20%** and scalability by **35%**.

PROJECTS

Fuse Checkout

- AI-assisted build of a modular checkout and promotions platform using TypeScript, Fastify, MongoDB, and Next.js.
- Architected a rule-driven offer engine supporting coupon, auto-offer, and bank-offer evaluation across cart, customer, payment-method, and time-based conditions.
- Implemented checkout session management, payment processing, webhook handling, refunds, settlements, and merchant-facing APIs with Razorpay integration.
- Built backend safeguards including JWT/API-key auth, rate limiting, repository/service separation, and scheduled jobs for session expiry, anomaly detection, and alert cleanup.
- Added automated test coverage for core business logic, route handlers, and integration flows to validate pricing, offer selection, and checkout behavior.

ACHIEVEMENTS

- Received H1 FY 25-26 Excellence Award at Pine Labs Technologies

EDUCATION

Scaler Neovarsity 2025

MS in Computer Science

VIT, Vellore 2021

BE/B.Tech/BS in ECE in IoT | 8.46 CGPA
